

KHS Valve Trip Lever for Bottle and Can Fillers

Notable Features and Benefits

- ✔ Better production yields from softer opens...Eliminates shock to filling process
- ✔ Long-Trouble Free operational life as result of lower controlled torque and elimination of high wear components
- ✔ Greatly reduced CO² usage as result of air tight seals
- ✔ Eliminates Butterfly wear due to lower operating trip torque
- ✔ No Brake pads that can wear causing contamination or reduced stability
- ✔ Clean design eliminating potential bacteria build-up

Product Description

All Parts are FDA Compliant food Grade non Toxic.
This design has eliminated critical sources of failure including variability in torques over time and potential contamination from brake dust and bacteria build-up.
Easily installed on all KHS Bottle and Can fillers

Product Function

The Valve Trip Lever is designed to consistently actuate the filling valve on KHS Bottle and Can Fillers at lower actuation torque while maintaining trip position reliably.
The adjustability of the torques for your production specific requirements ensures best control during the filling process and consistency over time.
